## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 28 April 2009 has been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 14 and 18 are rejected under 35 U.S.C. 102(e) as being anticipated by Nakano et al. (US 2004/0046884).

**[claim 14]**

5. Regarding claim 14, Nakano discloses an imaging apparatus comprising: an image pickup element having an imaging area in which a plurality of light receiving elements are two-dimensionally arranged (Figure 7, Item 3; Figure 2); a zoom operation unit for a user to operate expansion or reduction of an image (Figure 7, Item 18; Paragraphs 0066-0067); and a controller (Figure 7, Item 11; Paragraph 0030) that controls to mix a first number of pixel signals in the image pickup element, which is output from the plurality of light receiving elements in a first area of the imaging area, in a case that a first magnification is set by the zoom operation unit (Figure 9; Area A; 4-pixel mixing; Paragraph 0074 and 0077), and to mix a second number of pixel signals in the image pickup element, which is output from the plurality of light receiving elements in a second area, which is smaller than the first area, of the imaging area, in a case that a second magnification, which is larger than the first magnification, is set by the zoom operation unit, wherein the second number is smaller than the first number (Figure 9, Area B; 3-pixel mixing; Paragraphs 0074 and 0077).

**[claim 18]**

6. Claim 18 is a method claim corresponding to apparatus claim 14. Therefore, claim 18 is analyzed and rejected as previously discussed with respect to claim 14.

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 19 and 20 rejected under 35 U.S.C. 103(a) as being unpatentable over Nakano et al. (US 2004/0046884) in view of Ito (JP 2002-199266 A).

**[claim 19]**

9. Regarding claim 19, Nakano discloses a mode for 2-pixel mixture (Figure 9, Area C; 2-pixel mixing; Paragraphs 0074 and 0077), but does not disclose a further third mode where the pixels are not mixed as claimed. Ito discloses that when a zoom is increased past a point where 2-pixel mixture is performed, the pixels should be read out without mixing, thereby preventing deterioration of the image (Abstract). Therefore, it would be obvious to add a third mode as claimed wherein pixels are readout without mixing so that the magnification ratio could be increased without deteriorating the image.

**[claim 20]**

10. Claim 20 is a method claim corresponding to apparatus claim 19. Therefore, claim 20 is analyzed and rejected as previously discussed with respect to claim 19.

***Conclusion***

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
